

Combination Lock Instructions

Set Your Own Combination

1. Set the dials to '0-0-0', the pre-set factory combination.
2. Move the reset button to position 'B' as shown in picture 1. *This button is located inside the cabinet on the back of the lock mechanism.*
3. Set your own secret number by turning the dials. Your new number must be positioned centrally across the lock along the centre line.
5. Memorise and record the secret number then move the button back to the original position 'A', (picture 2), taking care not to move the dials. Your new combination is now set.
6. Close the cabinet and rotate the turn knob on the outside of the cabinet so the cam locates behind the latch plate.
7. To lock, scramble the dials which will stop the knob from turning.

To Open: Set the dials to your new combination and rotate knob.
