

Site safe, van valuables secured and properties protected: All with Sterling Locks

Sterling Locks has long been a favourite with locksmiths and the replacement lock market due to its great range of products that provide reliable performance at a good price. Now the building industry is also finding out about Sterling for use in new build as well as around sites and to protect equipment. Sterling products can be found in many builders' merchants and trade catalogues.

Locking up a good development.

Top of the range developments influence the style of all new builds so every home owner now wants seamless access between the inside and outside. Sterling's Window and Door Locks come at a good price and provide great quality – so the look can be achieved and the home still be secure. These finishing touches can help achieve a quick sale – and purchasers like having the security of these areas built in.

Site Safety

Keeping the unwanted off site is often a matter of protecting them from the dangers involved in building sites, as well as protecting equipment from thieves. Sterling Security Cables, Chains and Padlocks are weighty and well made, but still great value. Locking gates, site huts, generators and portable equipment is now part of good site management and the cost is minimal compared with lost time due to vandals, accidents or stolen items.

Van Locks (Hardened Steel Chrome Plated Hasp & Padlock)

Most of the stuff that is nicked from vans is taken on an opportunistic basis. It's expensive to replace stolen items, but more importantly for builders, it takes time out of the working day and puts projects back. Sterling's Van Lock is designed for extra integral strength with specially thickened hasp and hardened case. Its weight and toughness is enough to put off any burglar. Another good tip is to keep a selection of Sterling Security Cables in the van and link and lock equipment together and then to the inside of the van. Keys aren't necessary as the security cables can be used with Sterling's combination padlocks – the code can then be easily shared with colleagues.
